

Enable patients to manage their health.

PatientPORTAL is 2015 MU3 Certified, satisfies MIPS requirements, integrates seamlessly with acute and ambulatory EHRs, and aggregates data into the HealthyOUTCOME's clinical registry so that patients can see all of their data in a single portal.

PatientPORTAL by INTELICHART enables patients to:

- Stay in touch with providers using secure messaging
- Request, reschedule, and view appointments
- View detailed lab results and history
- Receive bills electronically and make online payments
- Manage accounts for dependents through the account owner's profile
- Access their information on our mobile app or the web-based version of the portal

Features:

Enhanced Patient Engagement

Portals are only valuable tools if patients utilize them, which is why INTELICHART designed a patient-centric experience for the PatientPORTAL. Patients can access live scheduling, which makes it easier for patients to see their providers on their time. Patients can also see lab results, view and refill medications, and send secure messages anytime instead of having to call during office hours. As a result of this rich feature set that patients want, adoption of the PatientPORTAL is higher than industry averages.

Aggregated Patient Data

Data is collected from multiple acute and ambulatory information sources, and then standardized into one registry. This aggregated clinical data registry enables patients to see all of their data in one view.

API Platform for Easy Integration

HealthyOUTCOME's robust API platform integrates seamlessly with acute and ambulatory EHRs, as well as HIE solutions and payer systems.

MIPS/2015 MU3 Certified

PatientPORTAL is 2015 MU3 Certified by the Office of the National Coordinator for Health Information Technology. Using the PatientPORTAL enables your organization to fulfill Meaningful Use and MIPS ACI requirements to become eligible for Medicare and Medicaid EHR Incentive Payments.
